Earlens® Contact Hearing Solution

Earlens is the world’s first contact hearing solution
• Delivers the broadest frequency range on the market for more natural, complete sound
• Transmits sound directly to the eardrum without a speaker to reduce feedback
• Exclusively available through a team comprised of an ENT and hearing health professional

LIFESTYLE CONSIDERATIONS
- Experienced hearing aid user
- Dissatisfied with sound quality of previous hearing aid(s)
- Patient willingness to comply with instructions
- Patient does not swim daily

CONTRAINDICATIONS
If any of the following contraindications are checked, the patient is not a good candidate for Earlens
- Abnormal Tympanic Membrane (i.e. inflamed or has dimeric or monomeric area)
- Perforated Tympanic Membrane
- Abnormal middle ear/ History of middle ear surgery (excl. tympanostomy tubes)
- Rapidly progressive hearing loss
- Fluctuating hearing loss
- Restrictive ear canal anatomy
- Chronic, recurrent ear infections (last 24 months)
- Compromised Immune System
- Dermatitis

FITTING RANGE

Earlens is indicated for individuals 18 years and older with a mild to severe sensorineural hearing impairment who can benefit from amplification

Users with a word recognition score less than 50% may not experience the full benefit Earlens has to offer

EAR ANATOMY REQUIREMENTS

Ear canal anatomy must be clear enough to allow:
(1) sufficient visualization of the tympanic membrane
(2) satisfactory lens placement (i.e. no significant exostosis)

Warranty Notice: Use of the Earlens product in a manner inconsistent with the above Patient Criteria may impact manufacturer’s warranty.
